

## Dedusting project

### Dedusting of a brushing machine

In a factory a brushing machine polishes knives. The dust-containing exhaust air of this machine is sucked off into an INFA-BOY filter unit. If requested, the filter can be equipped with wheels for mobile operation or it can be fastened at a wall with a bracket.

The filter cloth is mechanically cleaned.

#### Technical data

Filter type		IFB 66
Volume flow	[m³/h]	825
Filter area	[m²]	6
Filter material		Polyester fabric, oleophobic and hydrophobic
